

Graeme Haddow

LEAD SOFTWARE ENGINEER

Details

Stirling, United Kingdom
07595841691
graeme@haddow64.com
haddow64.com

Skills

Java 8-25

Spring / Spring Boot

Gradle / Maven

Python

Microservices

Extensive AWS Experience

Cloud Architecture

Infrastructure as Code
(AWS CDK & Terraform)

CI/CD
(AWS CodePipeline, GitLab CI & Jenkins)

Docker

Linux

Monitoring & Observability
(Grafana & AWS CloudWatch)

Git

MongoDB

DynamoDB

SQL

OpenSearch

Machine Learning Engineering (AWS SageMaker)

LLM Development
& Prompt Engineering

JavaScript / TypeScript / React

HTML / CSS

Cypress / Playwright / Selenium

C# / .NET / Razor / Blazor

Profile

Lead Software Engineer with more than 10 years of experience delivering production software. Brings together firsthand Java and Spring Boot development with AWS architecture, infrastructure as code, CI/CD, and operational ownership.

Experienced in leading technical delivery, making architecture decisions and coordinating internal teams and external suppliers. Takes responsibility for systems throughout their full lifecycle, from early requirements and design through deployment, monitoring, and production support.

Employment History

Lead Software Engineer at Diageo

APRIL 2023 — PRESENT

- Expanded FlavorPrint from What's Your Whisky into a reusable personalisation platform for whisky, beer, tequila, and cocktails, growing consumer flavour profiles from 400,000 to more than 70 million.
- Lead the development of Java and Spring Boot microservices on Amazon ECS using MongoDB, OpenSearch, and AWS SageMaker. Developed and deployed machine-learning endpoints and modernised APIs from Java 11/Spring 5 to Java 25/Spring Boot 4.
- Built a high-volume AI advertising module served through Google Ads, handling millions of daily requests with response times below 200ms. What's Your Cocktail won Best Use of AI at the Campaign Tech Awards 2025 and Gold for Data/Insight at The Drum Marketing Awards 2025.
- Led the AWS platform migration and rationalisation, moving services to CDK-based infrastructure as code and adding CloudWatch and Grafana monitoring, while improving stability and saving more than \$1 million.
- Built CI/CD pipelines and introduced SonarQube quality gates, raising unit-test coverage from zero to over 80% across the portfolio, with some projects above 95%. Added integration and Playwright acceptance tests for key services.
- Established modern engineering practices and standards across internal and supplier teams by introducing pull request reviews, improved documentation, and Architecture Decision Records.
- Built the backend services for Everpour using Java and Spring Boot on AWS Lambda, Python-based AWS Glue jobs and DynamoDB, enabling its mobile application and connected bar dispensers to report keg movements and dispense data. Everpour won Reusable Pack of the Year at the UK Packaging Awards 2026.
- Led development of Agent S7, an AI consumer-research platform used to gather consumer feedback and support next-generation product development. Designed and refined prompts and integrated the platform with LLM models through secure APIs.

Senior Software Engineer at BT

OCTOBER 2017 — MARCH 2023

- Led the design and development of reusable Java and Spring Boot microservices and web portals running in Docker. These consolidated several separate asset-management systems and processes into a common platform supporting approximately 80,000 employees across BT UK operations.
- Developed Spring-based REST APIs that provided back-end processing for tens of millions of company-wide IT and system-access requests each year.
- Designed and delivered a service using C# and .NET 5, running in Docker on Linux, which processed Microsoft Teams telephony and location data to keep the emergency services database up to date.

Software Engineer at BT

JANUARY 2016 — OCTOBER 2017

- Built a C# and ASP.NET MVC application to identify and reclaim unused Microsoft SQL Server licences.
- Developed a C# web application and API endpoints to automate the onboarding of EE employees into BT Active Directory.
- Maintained a legacy Classic ASP IT asset lifecycle system, introducing TDD with NUnit to reduce regression risk.

IT Support Manager at BT

AUGUST 2011 — JANUARY 2016

- Supported Windows Server, Active Directory and Exchange environments.
- Built C# WinForms tools that automated work logging and asset tracking, delivering more than £72,000 in annual savings and additional revenue.

Education

AWS – Solutions Architect, The Open University

2022

Completed the 12-week module with Distinction (90%), covering AWS architecture, networking, compute, storage, serverless technologies and microservices.

BSc (Hons) Computer Games Technology, University of Abertay Dundee

2006 — 2011

Degree with modules in C++, DirectX graphics programming, CUDA and GPU computing, low-level operating-system development, network programming, agile development, and mathematics.
